

The **Security Headwall – Level 2** provides typical hospital devices into a high security area. The lockable door covers all electrical and medical gas devices, yet will leave nurse call and other communication and entertainment connections available to the patient. The headwalls are made to order, so you can have the configuration and size that meets your requirements. Typically the headwall starts approximately 12-24" above the floor. The headwall extends to the ceiling to cover any exposed conduit or piping, as well as to eliminate any upper surface upon which a person could cause harm.

The Security Headwall is available in stainless steel or power coated steel.
