

The **Wedge Patient Service Column** provides two fully functional headwalls in one free standing unit giving flexible patient access. Conceived with staff productivity in mind, the unique angles of the Wedge allow optimum access to one or two patients while using minimum floor space. The Wedge comes complete with vertical equipment mounting rails on three sides, allowing you to position ventilators, pumps, IVs, and baskets exactly where you need them for each patient.

Park the bed at the best angle to allow maximum access to the patient and best use of equipment. Two beds can be parked at the column for recovery and pre-op applications.

The Wedge requires only single point connections for medical gas and electrical services. Shipped completely pre-wired and pre-piped, the Wedge is quickly installed and ready for use.

Features

- Integrated Unimount™ equipment rails for pumps, IVs and baskets
- Communications wiring can be pre-installed
- Dual headwall design allows two patient service
- Unique angled design allows you to position the bed for best access to the side of the patient with which you need to work.
- Available in a variety of colors and textures
- Single point connections for medical gas and electrical connections make installation simple.
- Manufactured to fit your specific needs
